Cover Letter for VAX LISP

AV-JP26D-TE

May 1990

Thank you for purchasing VAX LISP/VMS Version 3.1. This release includes several enhancements to make your VAX LISP applications easier to build and maintain. In addition, VAX LISP/VMS Version 3.1 also supports both DECwindows V1.1 and DECwindows V2.0. Please refer to the on-line release notes for further information on new features, corrected errors, documentation errors, restrictions, and incompatibilities.

Use of the VAX LISP/VMS DECwindows-based programming environment on VAXstations requires the VMS DECwindows environment. VMS DECwindows V1.1 is included with the kit for VMS V5.2. Version 2.0 is included with the kit for VMS V5.3. Both require separate installation. VAX LISP/VMS also includes a terminal-based development environment, which does not require VMS DECwindows, for VT series terminals. VAX LISP/VMS applications will run on any system supporting VAX/VMS Version 5.2 or 5.3.

The VAX LISP/VMS Version 3.1 documentation includes the following:

- *VAX LISP/VMS Program Development Guide*
- *VAX LISP Implementation and Extensions to Common LISP*
- *VAX LISP/VMS System Access Programming Guide*
- *VAX LISP/VMS DECwindows Programming Guide*
- *VAX LISP/VMS Editor Programming Guide*
- *VAX LISP/VMS System-Building Guide*
- *VAX LISP/VMS Object Reference Manual*
- *VAX LISP/VMS Installation Guide*
- *Common LISP: The Language* by Guy Steele (Burlington, MA, Digital Press, 1984)

The *VAX LISP/VMS Graphics Programming Guide*, order number AA-GH76B-TE, and associated update, order number AD-GH76B-T1, are available separately.

We believe VAX LISP/VMS Version 3.1 is a high quality product and hope you agree.

Sincerely Yours,

VAX LISP Product Management
