# DECrouter 2000 V1.1

Dear Customer,

This version of the DECrouter 2000 has the following new features:

- Support for the DECrouter 100. This option runs the DECrouter 2000 software on the DEC MicroServer-SP (DEMSB) hardware unit.
- High-speed support for the DEC MicroServer (DEMSA) hardware unit. One synchronous line can now run at speeds of up to 2.048M bits per second.
- The DEC MicroServer (DEMSA) hardware unit can also now support two lines at up to 384K bits per second, rather than 256K bits per second as stated in the documentation.
- Performance improvements. The performance of this product has been significantly enhanced since V1.0.
- Support for wildcard characters. You can now use an asterisk (*) as a wildcard character within some NCP commands.

Refer to the DECrouter 2000 Release Notes for further details of these new features.
