Before You Install DEC SoftPC Version 2.2 for VMS

AV–PG6YA–TE

To use SoftPC, you need a SoftPC license for each concurrently active user. Please ensure that you have the appropriate license for the software you intend to use. Licenses can be obtained from a Digital sales representative.

DEC SoftPC Version 2.2 for VMS is the follow-on product for both SoftPC Version 1.3 and VAXpc Version 1.0. It contains the following enhancements in both functionality and performance:

- Better application performance
- Better idle detect
- VT220 support (local or remote)
- Co-processor support (80287)
- EGA graphics support
- Availability on both RISC and VAX
- File-sharing support
- High-density floppy formatting support
- Ability to run on workstations or time-sharing systems

Before you install DEC SoftPC Version 2.2:

- Check to see that all the items listed on the *Software Bill of Materials* are included in the software distribution kit and are undamaged. If any items are missing or damaged, or if you find any defective media during the installation process, contact your Digital sales representative. The first line of the label on each media item lists the part number you need to order the replacement item.
- Be sure to read the online release notes. Step 4 of the installation procedure allows you to display, print, or copy the release notes.
- Carefully read Chapter 3, VMS Installation, in the *DEC SoftPC User's Guide*. Familiarity with this information will help ensure a successful installation.

DEC SoftPC for VMS comes with a warranty as described in the *Software Product Description (SPD)* addendum. If the SoftPC software fails to perform as described in the *SPD*, fill out a *Software Performance Report (SPR)* and mail it to the address on the back of the form. This starts the problem resolution process.

If you have a Digital support contract, it remains in effect. If you would like to purchase a Digital support contract, contact your Digital sales representative.
