DECprint Printing Services for VMS, Version 4.0

QL–YNCA9–AA

Dear Customer:

If the hardware you have purchased includes a software license for the above mentioned product, please read the rest of this letter. It contains important license and product information.

If the hardware you have purchased does NOT include a software license for the above mentioned product, please disregard this letter; it does not apply.

One way to identify whether or not you are licensed to use the above mentioned product is by looking at the HARDWARE MODEL NUMBER that you purchased:

- If the number contains an "R" in the fifth position, you purchased this hardware *with* a license.
- If the number contains a "U" in the fifth position, you purchased this hardware *without* a license.

This product does not include support for the License Management Facility. A Product Authorization Key is not required for use of this product, or for proof of license.

YOUR INVOICE WILL SERVE AS PROOF OF LICENSE FOR THIS HARDWARE PRODUCT AND ITS ASSOCIATED SOFTWARE PER THE LICENSE MODEL NUMBER LISTED ABOVE. You should keep the invoice and this document as valuable proof of purchase for your software license. This document in itself does not constitute a software license.

The above mentioned software license is subject to Digital's Standard Terms and Conditions.

The software may be installed on a processor or equipment configuration specified in the associated Software Product Description and only executed on the hardware purchased with this license. Please refer to the corresponding System Support Addendum for further details.

DECprint Printing Services for VMS, Version 4.0

QL–YNCA9–AA

If this PostScript printer comes with a license for DECprint Printing Services for VMS Version 4.0 software (QL–YNCA9–AA), the following product information will be important to you.

This software enables the printer to be configured as a networked printer in the VMS operating system environment. It also enables users to print files that contain PostScript operators using the standard VMS PRINT command. DECprint Printing Services software provides extended printing options which allow users to specify the following:

- Simplex or duplex printing
- Landscape or portrait orientation
- Multiple pages per sheet
- Scaling of PostScript images

You can obtain more information about using and managing PostScript printers with DECprint Printing Services software from the DECprint Printing Services software media and documentation kit. You need the kit to run the DECprint Printing Services software. The media and documentation kit is available through regular Digital ordering channels:

- Model QA–YNCAA–H5 provides documentation and a TK50 cartridge.
- Model QA–YNCAA–HM provides documentation and a magnetic tape.
