Block Space Requirements (Block Cluster Size = 1):

Disk space required for installation: 7,000 blocks (3,584,000 bytes)

Disk space required for use (permanent): 7,000 blocks (3,584,000 bytes)

DNS requires 7000 blocks of disk space. 2000 blocks of disk space on the system disk is required. 5000 blocks of disk space is required on the disk that will store the database. This can be the system disk or another disk on the system.

These counts refer to the disk space required on the system disk. The sizes are approximate; actual sizes may vary depending on the user's system environment, configuration, and software options.

Communication devices as specified by DECnet-VAX (SPD 25.03.xx).

OPTIONAL HARDWARE

Additional communications devices as supported by DECnet-VAX (SPD 25.03.xx).

CLUSTER ENVIRONMENT

This layered product is fully supported when installed on any valid and licensed VAXcluster * configuration. It is recommended that this product be installed on only one of the processors in the cluster. Refer to the Release Notes for a description of the Distributed Name Service on VAXcluster systems.

In order to configure some product specific attributes that must remain unique to each system, certain components of the product are stored in the system specific environment (SYS_$SPECIFIC:[SYSxxx]), or the VAX, MicroVAX or VAXstation processor on which the installation is performed. The remaining components of the product, including some or all of the executable images will be installed common to all accessing systems. The HARDWARE REQUIREMENTS sections of this product's Software Product Description and System Support Addendum detail any special hardware required by this product.

* V5.x VAXcluster configurations are fully described in the VAXcluster Software Product Description (29.78.xx) and include CI, Ethernet and Mixed Interconnect configurations.
