The VAX system must be connected to the same DECnet network as the PC client systems.

A minimum of 4MB of memory is required, however, 8MB of memory is recommended. Memory requirements vary depending on the server CPU, the number of clients using the server and the other applications running on the server.

Disk Space Requirements (Block Cluster Size = 1):

Disk space required for installation:	7,000 blocks (3.50M bytes)
Disk space required for use (permanent):	5,500 blocks (2.25M bytes)

These counts refer to the disk space required on the system disk. The sizes are approximate; actual sizes may vary depending on the user's system environment, configuration, and software options.
