*Block Space Requirements (Block Cluster Size = 1):*

With all 10 VPA data definition files:

| | |
|---|---|
| Disk space required for installation: | 14,307 blocks (7.4M bytes) |
| Disk space required for use (permanent): | 8,133 blocks (4.2M bytes) |

With no VPA data definition files:

| | |
|---|---|
| Disk space required for installation: | 14,307 blocks (7.4M bytes) |
| Disk space required for use (permanent): | 7,197 blocks (3.7M bytes) |

These counts refer to the disk space required on the system disk. The sizes are approximate; actual sizes may vary depending on the user's system environment, configuration and software options.

In addition, disk space is required for the collection of performance data. The required disk space for the collection of performance data varies, depending on system workload, sampling frequency and duration of collection. As as guideline, 6000 blocks (3 Megabytes) per node per day will be adequate for a 2 minute sampling frequency with a moderate workload of 40 to 70 concurrent processes during a 24 hour collection period.
